# A3 Project:

Process Work

Game Goal: When the Blocks Rise, click on them to Knock them down before they go down

Whack a Mole type game

Example of how I want the game to work/look:

using "for loops" to check every block

might use "while loops"

NOTE: DoWhile does function once IF false

IF "False" Remove the same Index

IF "TRUE" raise the Index in the ~~Process~~ Array

+Function checking to see IF index is "true" or "false"
